

Why a food waste disposer is the responsible choice

Your food waste is ground into tiny particles by your InSinkErator® disposer

These are flushed through your plumbing to wastewater treatment

Where they can yield valuable biogas

and fertilizer for agriculture

Food waste is a growing problem

7 million tonnes of household food goes to waste each year. That's £13 billion of food purchased and thrown away. Part of that waste goes to landfill sites, where it emits harmful greenhouse gasses. This could yield renewable energy or natural fertiliser but just 10% is separately collected and less than 7% is home composted. 19 million tonnes of greenhouse gasses are produced every year, just from household food waste.
