# Illuminated LED Mirror IP44

## Installation

Carefully mark the desired position for the mirror using the dimensions shown above. Then proceed to drill the holes using the 8mm drill bit for the Rawl wall plugs and screws.  
**Note:** Be careful to avoid any wiring or water pipes.

Insert the Rawl wall plugs and screws into the wall. Be sure to leave a gap of approximately 3mm between the wall and the screw head, so the screw is sticking out slightly.

Connect the cable to the mains supply and proceed to attach the mirror to the wall by slotting the brackets onto the wall mounting screws.  
**Note:** Ensure that the infrared sensor is located at the bottom of the mirror when mounting.

## Notes

**Caution:** To avoid interference, the sensor must be placed a minimum of 150mm away from any object/surface.

The Demister Pad is located in the centre of the mirror. The de-mist function may take several minutes to propagate to the outer edges of the mirror glass.

## Operation

### Product Overview

This is a stylish and unique round LED mirror, capable of making a design statement in any bathroom.

The perimeter of the mirror is fully illuminated to provide a soft glow and the light is cleverly diffused to give the contemporary look of no visible diodes.

The mirror also features an infrared sensor, which means the light can be switched on/off with the swipe of a hand, as well as a demister pad to ensure the mirror always stays perfectly clear.

## Maintenance & Care

- Ensure that the power is disconnected prior to cleaning.
- To keep the finish of this product, wipe over with soft cloth periodically.
- Do not use harsh chemical solvents, this may dis-colour or damage the finish.
- Do not over-tighten screws on the terminal block.

## Lighting Technology

This product contains a light source of energy efficiency class G. The light sources in this product are not removable.
