

RMG004DG

The RMG004DG is a full privacy aluminium double swing driveway gate with a vertical solid infill design and bell- curved top, providing a stylish and streamlined design.

Full privacy is a great option to ensure the maximum protection of your property.

Although aluminium is very strong, it is also lightweight which makes it a versatile material. This is perfect for the fabrication of gates compared to traditional metals such as; wrought iron, cast iron, wood or stainless steel.

Another advantage of the RMG004DG is that it is very low maintenance. Aluminium is highly resistant to corrosion unlike other metals, it will not suffer from changing weather conditions and actually becomes stronger in low temperatures, perfect for UK buyers!

In order to keep the gate looking brand new, simply wash down with soapy water and rinse. There is no special treatment required and the gates also have a 5 year manufacturer's guarantee.
