

**Storage Guidelines:** Reseal lid securely after use. Store in a cool and dry area between +5°C and +18°C, out of direct sunlight and away from heat sources. Do not freeze. Store locked up. Keep away from children. If these steps are taken, the solution should last for around 1 year.

**Visit [www.securesasetregister.com](http://www.securesasetregister.com) to:** 1. Register your kit with your name and contact details. 2. Add individual items of property which you have marked with SelectaDNA to create your own personal 'asset register'. 3. Update ownership details for any marked items which you may have sold on or given away.

**Adhesive Safety Warning & General Guidance:** The mixture is white in colour when applied but becomes clear as it dries. Under UV light the liquid glows blue enabling the police to locate the markings. The microdots will be visible (on light coloured surfaces) as black dots, so should be applied to a concealed area. If marking items kept outside, apply solution to areas less likely to be exposed to direct sunlight. The adhesive supplied is a water-based, non-flammable liquid. It is of low toxicity, but care should be taken not to ingest the liquid. If accidentally consumed, take plenty of liquid, preferably water. Do not induce vomiting. If breathing is difficult, remove the victim to fresh air and keep at rest in a position comfortable for breathing. In case of accidental contact with eyes, liberally wash with clean water. Contact with skin should be avoided (some sensitive skin types may be irritated), but if contact occurs wash with soap and water.

### Step 1

Shake the bottle of SelectaDNA for 15 seconds before use.

### Step 2

Choose an area to apply, ideally in crevices, textured surfaces or hard to reach areas. Ensure it is clean and dry.

**NOTE: Electrical devices must be disconnected from the power supply. Do not apply to PCBs.**

### Step 3

Dip the applicator into the bottle, ensuring you have only a small amount of liquid, and ideally at least one microdot on the applicator.

### Step 4

Apply the mixture to the item in a single thin layer. Although touch dry in approximately 30 minutes, the mark will take around one week to cure completely.

**NOTE: Aim to mark larger items in more than one area.**

### Step 5

Apply a warning label to the marked items and warning stickers to ground floor windows and glass doors. This will act as a theft deterrent as thieves are scared of DNA.

### Step 6

Register on the secure Home Office compliant and Police approved database so your property can be identified if lost or stolen.

[www.secureassetregister.com](http://www.secureassetregister.com)

### Step 7

After each use rinse the applicator under a tap so the foam tip remains soft for the next time you use the solution.
