

# DANSAND® NO GROW™

## Environmentally Friendly Weed Inhibiting Joint Filling Sand.

Transform Your New or Tired Drive or Patio in 5 Steps!

**IMPORTANT:** Completely remove weeds with an **environmentally approved weedkiller** before you start any work. No Grow will not eradicate existing weeds that have roots either in or underneath the joints. No Grow is **not** a weedkiller, it is a weed inhibitor.

**Step 1**

Clean out the joints down to at least 40mm. **Please then use an environmentally approved weed killer again at this point.** Follow all the manufactures instructions for use.

**Step 2**

Clean off the surface with water as it will have usually been soiled from cleaning out the old joint filler. **Leave the cleaned paving to completely dry out BEFORE filling with new 'No Grow'.**

**Step 3**

Mix the No Grow well before use. Sweep the 'No Grow' into the joints using lengthwise diagonal movements. Check there is enough 'No Grow' in the joints by firmly pressing an utensil, down into the filled area. The utensil should not sink.

**Step 4**

When all of the joints are completely filled, clean the surface with a soft brush. **Maintenance:** Keep the joints clean, periodically top-up if required due to water and wind erosion.

**Step 5**
