

ADJUSTABLE PAVING PEDESTALS For TERRACE AND PATIOS

1ton

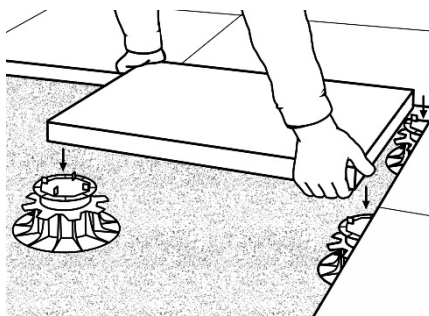

STEP 1 - Site preparation :

- If you are using the risers on a concrete, they can be laid directly onto the ground. If you are using the risers on grass, dig around 10 cm of soil and line the ground with geotextile and hardcore.

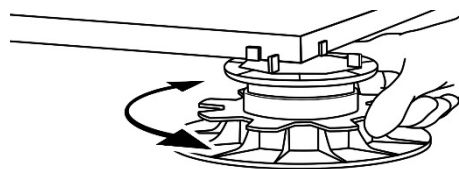

STEP 2 – Recommended Spacing:

- 40 cm x 40 cm : 6 pedestals / sq meter
- 50 cm x 50 cm : 4 pedestals / sq meter
- 60 cm x 60 cm : 3 pedestals / sq meter

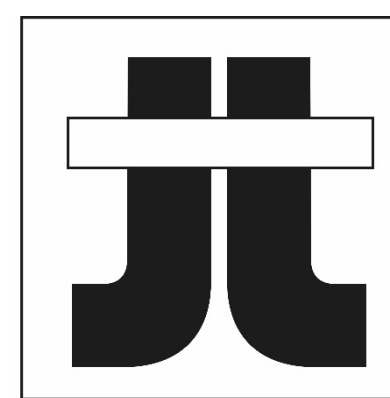

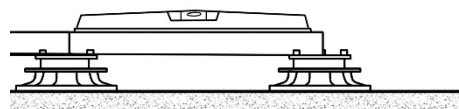

STEP 3 – Laying the Slabs

- On top of risers are 4 spacers, use these to position the slabs.
- If you preferred, these can be snapped off so the riser can be positioned underneath the center of the slab.

STEP 4 – Adjust to desired height:

- Use the 8 pointed cut out nut to easily adjust, set and maintain the desired height
- Use a spirit level to make sure the slabs are kept horizontal.
