## III. Instructions & Note

### -Instructions-

#### STEP 1

Get the drain coil and insert into the pipe. Slowly push the coil down the drain. Once you reach the blockage, turn the tail screw with a screwdriver to turn the handle clockwise and anti-clockwise while pulling and pushing slightly.

#### STEPS

#### STEP 2

At any point you can pull the coil out which should bring up parts of the blockage, clear the auger and reinsert following the above procedure. Repeat until the pressure ceases and the pipe feels clear.

**Note: Do not force the coil down at any point, this could dislodge pipework.**
